Status of the Claims

Claims 1-59 have been presented for examination.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-10, 37-41 and 44, drawn to a first device for separating charged particles from a solution and a method of use therefor.

Group II, claim(s) 11, 37-40, drawn to a second device for separating charged particles from a solution.

Group III, claim(s) 12-19, 37-40, and 46-50 drawn to a third device for separating charged particles from a solution and for crystallizing a protein.

Group IV, claim(s) 20-27, 37-40, and 51-55 drawn to a fourth device for separating charged particles from a solution and for crystallizing a protein.

Group V, claim(s) 28-34, 37-40, 45, and 56-59, drawn to a fifth device for separating charged particles from a solution and for crystallizing a protein.

Group VI, claim(s) 35-36, drawn to a device for separating charged particles from a solution and measuring the pH of the solution.

Group VII, claim(s) 42, drawn to a first method of crystallization with any of the devices of Groups I-VI.

Group VIII, claim(s) 43, drawn to a second method of crystallization with any of the devices of Groups I-VI.

Art Unit: 1651

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The device of Group I is the simplest and only element in common between the various groups as presented, each of the devices of the separate Groups presenting features and/or elements not present in the devices of the other Groups. However, the special technical feature of the first listed device of Group I does not provide a contribution over the art as evidenced by Figure 3 of Sanjoh et al. (Jan, 1999) which shows a device that meets the claimed requirements. Accordingly, there is no special technical feature linking the Groups, which is a contribution over the art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

This is a restriction/election only.
